## Introduction

Icelandic is a North Germanic language which is the sole official language of Iceland. The majority of Icelandic speakers, some 330,000 people, live in Iceland, a sparsely populated island in the North Atlantic. The largest population of Icelandic speakers outside of Iceland lives in Denmark, around 8,000, many of them students seeking higher education. Iceland was a part of Denmark for over a century, from 1814 to 1918; full independence was declared in 1944 when the Republic of Iceland was established. Approximately 5,000 Icelandic speakers live in the United States and around 1,500 in Canada, the only country outside of Iceland that has a long-standing Icelandic settlement, dating back to the 1880s. Icelanders settled mainly in Manitoba, many of them fleeing the crop failures, hardships, and poverty following the eruptions of the volcano Askja in the northern part of Iceland in 1875.

The Icelandic language derives from Old West Norse, also termed Old-Icelandic along with Norwegian and Faroese. Icelandic is a very conservative language. Whereas most Germanic languages have greatly reduced the levels of inflection, Icelandic has not and has retained a four-case "synthetic" grammar. The conservatism of

the language can make it difficult to learn, but also has its advantages. One of them is that Icelandic speakers can easily read classic Old Norse literary works, created in the tenth through thirteen centuries, many composed or written down in Iceland, such as the Icelandic Sagas and the poetic Edda. Icelanders are very proud of their literary heritage, which is an integral part of the nation's identity and cultural history.

Since the 19th century, a great effort has been put into preserving the Icelandic language. This movement started when Danish influence became ever more apparent, especially in the capital and among officials, and preservationists began seeing it as a threat to the Icelandic language. Danish influence is no longer a cause of concern, while English on the other hand has increased its influence and has become more prominent with new technology, entertainment, and social media. This is a matter of significance for those who want to preserve and maintain the language.

One aspect of the preservation of Icelandic is substituting new words created from Old Icelandic

# Icelandic 1

or Old-Norse roots to replace foreign loanwords. Some examples are:

- jet = *pota*, made from the verb *pjóta* (to rush),
- computer = *tölva*, made from *tala* (a number) and *völv* (a prophet),
- laptop = *fartölva*, made from the word *tölva* and the prefix *far-* which indicates movement or being on the go.

Loanwords that do become acknowledged as a part of the Icelandic vocabulary have to be adjusted to the Icelandic alphabet and the four-case grammar. This is part of the official language policy in Iceland.

There is a national Icelandic Language Committee whose role is to protect and strengthen the language. There are also Professional Word Committees in many professions (electrical engineers, civil engineers, archaeologists, etc.) whose mission is to find and create Icelandic words instead of foreign loan words. There is a government fund that Word Committees can apply to for financial assistance.

Although Iceland is a big country geographically, and the inhabitants have lived there for centuries, scattered few and far between, along the coastline, the language did not develop dialects and is the same in all parts of the country. There are several reasons for this, among them the strong literary tradition developed early on in the country and the fact that through the ages the workforce frequently traveled between regions. There is only a minor dialectal difference in sounds, mainly apparent in the slightly different accent that people have in the north.

Icelandic is perceived as a difficult language to learn because of the grammar, which is indeed challenging. Nouns, adjectives, and pronouns are declined in four cases (nominative, accusative, dative, and genitive) and two numbers (singular and plural). Even some numbers are declined in cases. Verbs are conjugated variously for tense, mood, person, number, and voice — active, passive, or middle. On top of that, words can have a vast range of meanings depending on the particles with which they are used.

When pronouncing Icelandic words, keep in mind that the main stress is always on the first syllable.

## Icelandic Alphabet

The Icelandic alphabet is based on the Latin alphabet and has 32 letters, including six vowels duplicated with acute accents: *a, á, e, é, i, í, o, ó, u, ú, y, ý*. There are two additional vowels: *æ* and *ö*. The rest of the letters in the Icelandic alphabet are consonants with two additions to the Latin alphabet, the letters *ð* and *þ*. The letters *c, q, z*, and *w* are only used in Icelandic words of foreign origin. The letter *z* was a part of the Icelandic alphabet until 1973, when it was replaced by the letter *s* which in modern Icelandic represents the same sound that *z* did.
